Hi i have a problem with LE

I install the rentools properly to the drives where it belongs and just close the installer when finished. Then i go to the map Leveledit and open the program. When i create a new mod package and open it then LE begins to load and when its fully loaded i close it down again. when you do that there should be a folder being created named presets in your mod folder. But for some strange reason is this with me not the case. does anyone know something about this bc in LE itself there are also no presets loaded when ip open it ????????

Make sure that The First Decade is'nt the source of Renegade. If it is, take the Renegade folder from it and put it in the directory "C:\Westwood\" for LE to work. The directory has to be as follows:  
C:\Westwood\Renegade\  
Currently, Level Editor tools only get the presets from "C:\Westwood\Renegade\Data".
