Can you post a screenshot? Are you installing Renegade or RenGuard?

I don't think there's much we can do :-S. Did you try using the disc on another computer? Does it work then? Do you have two CD-rom drives, maybe try in the 2nd one.

Did you scan for viruses or spyware?

ok i fixed it

1st you need to manuely install as many files as you can to decrease setup time do this by getting winrar and extract all files in the cab files in the install file on the cd to the renegade folder(files will go where they are suposed to go)

then just run normal installation and it will get the rest of the files installed then just load up game and it will work

if you have futher questions message me on xfire(xbartx99) or msn xbartx99@hotmail.com
