hi all,

when i lauch my linux FDS server :

Renegade Server Wrapper 0.3 (c) 2003-2004 by Blackhand Studios

Opening TCP Port 4853

Using scripts.so for Redhat 8.0

Started Server with pid 23077

Renegade Free Dedicated Server v1.037 GU-838 03/01/2003 - 19:00:34

Console mode active

Linux Scripts Patch v0.01 enabled Renegade version.

- Initializing scripts.so patch!
 - Scripts relocation offset: 0x00000000
 - Original built-in script count: 1635
 - Total script count: 2237
 - Linux Scripts Patch succesfully
- *** Auto starting game. Type 'quit' to abort ***

Initializing LAN Mode

Applying server settings

Channel created OK

Loading level C&C_Islands.mix

Load 0% complete

Load 10% complete

Load 19% complete

Load 27% complete

Load 34% complete

Load 41% complete

Load 46% complete

Load 52% complete

Load 57% complete

Load 100% complete

Level loaded OK

Initializing GameSpy Q&R

-> Map "C&C_Islands.mix" detected, loading settings..

New settings detected and loaded!

it's ok i think, but ingame when i type !help or other command the bot don't answer... and i can't acces to moderator commands...

how to acces to mod command ingame or with other programs ? like Renrem (doesn't work with LFDS ???)

thanks by advance !

if you try to send a msg from your own telnet
(for this start -> Command-> write here the SERVERIP + RenremPort sample("127.0.0.1 4853")
and press OK, then it should give you a Welcome to the... , here enter the renrempassword and
then try a simple "msg hi") does that work for you?

i lauch renrem, i type the password, but NOTHING !

is it a special renrem ? linuxrenrem or other ? is it macrem ? if yes, where can i download it please ?

with core patch 1 ?

with renguard ?

or other ?

where can i download or find on my computer macrem please ?

as you see he is running with wrapper 0.3
and CFGPower as you see i gave you a simple tutorial how you do it
(for this start -> Command-> write here the SERVERIP + RenremPort sample("127.0.0.1 4853")
and press OK, then it should give you a Welcome to the... , here enter the renrempassword and
then try a simple "msg hi")
and for renrem it is not supported on linux.

on your windows pc you could do the same simply over ssh on your lfds box -> (Telnet o

localhost RENREMPORT)

em, no.
this may help

translated msg.

wie du siehst, läuft er mit Verpackung 0.3 und CFGPower, da du mich siehst, gab dir einen einfachen Tutorial, wie du es tust (für diesen Anfang - > Befehl - > den Bediener hier schreiben IP + RenremPort Probe („127.0.0.1 4853“) und O.K. betätigen, dann sollte sie dir ein Willkommen zu geben... , das renrempassword hier betreten und einen einfachen „Msg hallo“) und für renrem wird er nicht auf linux gestützt

em.. because i'm french...

where must i write serverip for connect to the remote administration ? where do i it ?

on my computer but where ?

thanks you by advance

In windows press start->run->type in "cmd"->type in the console "telnet"->write here the SERVERIP + RenremPort sample("127.0.0.1 4853") and press enter, then it should give you a Welcome to the... , here enter the renrempassword and then try a simple "msg hi" something like that.

in windows, that shouldn't work as there is an encription. that is why you have to use FDSTalk.dll

the17doctor you never had an linux fds server ?
Well if you had one then you would know that the LFDS doesnt support Renrem and only macs

renremreplacement his lfds wrapper which doesnt have any encryption.
