Hi all... Here's my problem: I tried to launch a LAN game between 2 computers, but when loading the map, renegade closes and renguard starts... When I click on "Renegade" in renguard, it launches renegade.... So I click LAN game and it startes renguard, and so on... If I uninstall renguard, the LAN game goes smoothly... Can someone help me please?? Thank you!!

I play LAN games sometimes with RG on, nothing like this ever happens to me, you might want to try reinstalling.

Run game2.exe if you want to play on LAN.
