Noticed wierd thing today, I remember this from like years back anyway heres the thing:

1)lets say you about to be kicked, you hist F2 or F3 (for chats), you are then kick, but you have the chat thing still opened, you rejoin the server, and what you typed showed up (ie: you typed, "SERVER=HACKED", when you join, it will show that the Host: said that )Im not sure if everyone can see that, will check tho

It only shows up for the client who was kicked/said it. The server and other clients do not see it.

What causes this to happen? Could this possible be exploited to do something else or should be fixed?
