---

I posted this in the n00bstories forums to see if anyone could decypher it, so far noone could. I was wondering if perhaps someone here could decode my code.

The following is a coded message. This is a test of brain power. Who if any of you can decode this message?

It's double coded so if you break the first code and it doesn't make sense, don't get discouraged as there's still another code to break. I've spaced things out to make it a little easier to solve.

After you decode the message there's a riddle to solve. If you manage to make it that far then reply to this message with your answer to the riddle in the same code that this is currently in.

IF YOU DO DECIPHER THIS MESSAGE, DO NOT REPLY IN NORMAL TEXT, ONLY REPLY IN CODE AND DO NOT TELL ANYONE THE MESSAGE OR THE CODE. It is meant to see who can decypher it and only those who can should be able to read it.

00111 10101 10010 00101 10010 01110 00101 10010 00111 01010 00010 01111 00101 00010

õ\*¶...lcÖY³E

is this supposed to be a code of your own, or are you being retarded like the last guy that posted before you?

Based on basic frequency analysis I assume 00101 is a space.

uummm.... how?  
wouldn't it be simpler to say that a space is a space? lol

Now I look at it more it's probably not a space, but the spaces themselves are just to group the series of numbers, so I believe 5 numbers represent one letter.

---

We see commas and full stops, but not defined spaces that separate larger groups of numbers. It's therefore safe to assume that one combination of digits represents a space.
