Hi, I just got my renegade server working and brenbot running. Only issue at the moment is that the commands for brenbot don't work on IRC but they work fine in-game. Has anyone else had this problem or any ideas why it may not work on IRC?

It's usually the other way around... does the bot join the IRC channel ok, and have you given it voice (+V) ?

Your specified FDS directories are incorrect but your remote settings are good. (Had these problems b4)

I have no idea what happned, I touched nothing... The IRC server crapped out and then after the bot rejoined it magically works... So it looks like all is well for the moment, hopefully it keeps working

Yay for magic!
