Subject: Found a huge error in new NR Beta!

When I configured my server with the new NR update this happened:

My server started. My server connected. My server loaded map. My serevr created harvester. My server shuts down. My server started. And it goes on that way. Also when I have NR configured normally it says: Error Overflow! Runtime error '6'!

How is this possible?

why dont u post this in NR forums rather than here? lol

and do you get a pop-up message on NR before the server shuts down going on about incompatbale scripts.dll version?

also overflow means that you have a number in your config too high or too low, it shouldnt crash though.. could u get me a Screenshot of this error?

Sure and yes my scripts.dll are compatible. It's the BlackIntel Scripts. Or has it something to do with the Blackintel.dll file?

sigh

copy + paste what shows up in the NR console and in IRC please

Check ALL numbers in the WHOLE config file, the FDS tab, the NR tab and the More Options button and all its tabs. The max ammount is 5! No more!

Not for the FDS.
