Here are some pre-made tiles I made when I was free and their mainly for racing. In this file, there is a straight tile, curved tile(it looks bad), tunnel straight tile, high straight tile, high curve tile, a tile that transits from low to high and a ramp tile. Screenshot below. My texturing is not good at all and the tiles can fit a Mammoth Tank. This is meant to make making racing maps simpler if you don't want to waste time modelling every thing. Place them next to each other and connect a la Trackmania. You can texture the blockers and pillars yourself. Just one question: What is the perfect physical setting for a racing car that acts like one seen in Trackmania?

I suggest setting the UVW map to "box" on the slope piece, then the texture wouldn't stretch like that.

Nice idea, I had a simalar one too

I wanted to make DM map tiles much like the one seen in the Time Splitters map maker, I still have a sketch of the various sizes I had planned on my wall.
