Ok I got some instructions for someone but I think I did something wrong here. I wanted to make a rock u can blow up, I made the animation and added an emmiter to it with proxy. Than I exported it to level edit with the frames set in the spot and the animation on the 0,0,0 in the XYZ coordination boxes. I loaded it into my map and tried to kill it, nothing happens, can anyone give me a step by step instruction of what to do in level edit to make the rock blow up?

Health is 74 with skin flesh. The collison in renx is all select, and in level edit its set at stop.

Try not to have the vehicle setting selected to, because that is like having a double collision for vehicles (although it should not effect its death). Wait, is you rock a vehicle or terrain type, because if its a vehicle it needs a world box and the world box would have the physical, and camera collision option checked. And the rock itself would only have the projectile checked. It would help if you took a picture of its settings in level editor, and posted the picture.
