This strikes me as bad.

Okay, basically, long story: Was playing Renegade, with RG, and then I think I restarted my PC for some inane reason...Put it back on, loaded Azureus to get some torrents going, and found that the port or something was blacklisted, so I changed it a couple of times, and nothing really improved. Closed it down (it causes evil lagging and dragging in Renegade), and fired up RG. Wouldn't load, got stuck finding the server list.

Turned it off, tried Renegade on it's own, it worked. Since my style is sniping, and if you shoot people and you are well hidden, they tend to suspect you of cheating, so they !forcerg me, and I get kicked. This simply will not do.

So I uninstalled Renegade, deleted RG because I forgot how to uninstall it, realised how to uninstall it, did so, maybe too late or something.

Anyways, I installed Renegade again, installed RG, and it came up with the above error, which instantly closes RG down.

Any ideas?

I'm on XP Home.

errrrrrrrrrrm

do you have a BandTest.original.dll in your Renegade dir?

rename it to BandTest.dll (and delete the original bandtest.dll)

then let RG update you
