10,000 RPM sounds sweet!

Is it worth the money?

I am ok with 150GB i have a 40 now and am hardly using half of it.

No, I am building a new computer lol!

Thats what this is for!

Way too pricey.

http://www.newegg.com/Product/Product.asp?Item=N82E16822144701

Get two of those- which is cheaper- and set up RAID 0. There'd probably be much better performance, not to mention more space.

Yah thats a good idea.

I don't know how to set RAID 0 up though, I think I will get one of those because I don't need super fast as long as stuff loads at a decent speed I will be ok.

Don't set up a RAID 0 nor get a 10,000 RPM drive. There's only a marginal performance gain compared to the risk of data loss for RAID 0, and you'd probably hate the constant buzzsaw noise of the 10,000 RPM drive.

It's actually pretty hypnotic.

For a PC you shouldn't need 10k drive.

If it were a server then I would understand, but don't go about dishing out the crazy amount of money. Find yourself a good SAS drive or SATA II drive with loads of space for a better price
