As I enter most of the servers and try to play, my player freezes when I try to move left or right, crouch and/or backwards. Anyone know what I need to do to get this game back to where it used to be fun?

Join the game, stand still for 5 seconds, then try moving. (I'm guessing it's lag)

this happens to me sometimes, if you move the mouse around until your aim starts to move you can start walking, its weird, but it works.

I tried that but I only froze when I used the other keys such as left, right, crouch and backward. After about 3 seconds I am free to move but only to go forward, jump and shoot. One of the sites noted that my client scripts were old and that I should go to Black-cell.net.

Yes, that often happens to me. It can't be out-of-date scripts, as I have 2.9.2.

Are you using your numpad to move? If so, it are the CP2 keys.

When you change your keys: yes.

If it is the CP2 keys, then what would I need to do?

There's a file called keys.exe in your renegade directory. Open it and change the different entries to keys you don't use to play renegade.
