I'm probably not the first person to notice this, but inside M06.mix there is a file called x6b\_pistols.w3d.

It's some cinematic file featuring 3 pistols. Nothing special at first, but when i took a closer look at the funny floating pistols, i noticed they contain a part that's left out of the pistol we know... Here's a pic:

I tried attaching the bar to the standard pistol myself, but im kind of a 3dmax/gmax retard... That's why i most humbly ask if anyone is able to do this for all of us. It would be cool to see this useless piece of heavy metal in action.

I've seen this ingame before, i'm sure one of us already has it rigged and textured etc. Search (look up) or ask around.

What an odd pistol. I wonder if that cool pistol from the beta renegade is in the game somewhere...

Just a single texture, but it doesn't win the high quality texture award. It's probably for 3rd person.

Back on topic,

Mero, i searched the forums for the pistol but i didn't find a thing. Any idea where and when you saw it? (oh and by the way, the green piece of skin is already inside the standard pistol texture)

I found the gun model, BUT! It's for pickup only. You can't use it ingame. It was meant to be a spawner. I will post the model when I can reach it, cause it's not on this computer.

I am trying to make the first person model in 3ds max now, but there's one problem. Since I deleted some kinda box, the model get's blocked away when you try to zoom in. Please tell me how to fix it, cause then I will post it on the forum.

im not sure if i understand what you mean, why would the pistol zoom?

can't you just use the w3d files of the already existing pistol, delete the model, keep the bones, and put the pimped pistol model at exactly the same spot where the original was? maybe this will also let it use the existing animations, but im not sure, because im not deep into ren modelling.

edit:

just to make sure were on the same wavelength

are you talking about the mp7, or standard pistol with the "roll cage"

[View Forum Message](#) <> [Reply to Message](#)

---

When I say zoom I mean the 3d model, not ingame zoom like sniper. And I was talking about the Beta pistol from the screenshots. I already asked EA games if they could send me the model, but I don't think they're going to send me the file. Else we make it ourselves.

The pistol mod is now fully working! The reload animation isn't correct and the handpositions will

---

be fixed, but it looks like it. I'll post the w3d files and the textures below. Thank me please! I got it working!

---

nice to use and look at but its missing the model for your back and the reload animation has an un-used duplicate clip hovering.  
edit: the skin is a little small and wierd  
do you think westwood/ea still want to hold copyright on this?

The stank's missile launcher can go that high.

Also, notice how in that picture, the pistol's HUD icon is the other missing pistol?

[View Forum Message](#) <> [Reply to Message](#)

---

Yep you're right about the pistol hud. But about the model again. I'm still busy making the right hand animations and the right backmodels and dropmodels. The gun's handposition isn't quite what it should be, but this will be fixed later, because I didn't have much time for it then. But please enjoy what we have now, and I will find the Pistol HUD for you . I think it's probably located in the 2003 version of C&C Reborn, that's where I found another model of the pistol first. I'll take a closer look at it.

And one more thing a little off-topic too. Watch the green/red thing that's near the buggy...What the hell is that? A mutant? An engineer? Stealth Black Hand? You name it...I think it's a bit weird over there.

Cool, thanks for your hard work.

Here are some things i noticed that could need a fix...

1. The scaling is different, but it's not directly bad. Everyone likes a bigger gun, right?
2. The clip has some inverted polygons, you can see through it.
3. The clip stays at its place during reload, another clone moves
4. It has no muzzle flashes
5. The backmodel seems to float at the right shoulder
6. It uses a different skin when the standard pistol skin is exactly the same one, it also has the textures for the roll cage, saves everyone 1 mb.
7. Same for the weapon clip skin
8. The empty shells seem to shoot out of the front in 3rd person.
9. The reload animation also has the model included, it only needs the animation data.

Please dont see this list as flaming, but rather as constructive tips to get it perfect.

Also i have a question, wich i shortly meantioned earlier.

Wouldnt it be easier to import the existing pistol model we all have, and then copy paste the rollcage, to that one? Maybe this would also allow it to use the already existing animations, skins and settings. But im not sure, just my theory...

I guess you didn't download the new zip archive I posted? It has the backmodel fix and the handposition fix. The muzzleflash doesn't seem to work, though it's implented. The fire animation isn't made yet and I ain't thinking of doing that. Maybe i'll make that later, but don't guess for it.

I did download the right file

and it uses the standard pistol firing animation, i was just guessing it would be easier to let the new one use all the existing animations

If this old pistol was found inside a cinematic, maybe that other pistol is lying around inside another cinematic.

It was used in the end video cinematic in M02, maybe Westwood left it there.

Yes, but most pre-recorded stuff was done in the Renegade engine, and there are already other files lying around from the videos, so there is a good chance that pistol is in one of them.
