Hi all, i have modded my map for an inf only server, so i place the lsd and ldd and the objects file in the correct place on the server but it finishes loading and then crashes straight after.... Y does this keep happening?

In this zip file i have put the ldd,lsd and the objects file in, and i have scanned for viruses before uploading.

Any help would b really appreciated.

Take the .lsd out. .lsd will crash the server if it is not needed.

Uuhm..Servers crash when you use an objects.ddb file. Rename it to objects.aow and it should be working fine. And delete the .lsd file.

Forgot about that

Yeah, if you have SSAOW (recommended) change objects.ddb to objects.aow. And you don't need the .lsd file unless there's problems with doors ('lag' through them) or if you're using waypaths.

Make sure you use the right presets for them, and you have to make a whole new harvester waypath if you want the harvester to drive. The tutorial on www.renhelp.net will help you out.

I remember when I put a objects.ddb in a FDS data folder, server didn't crash..just Mysteriously went of the server Listings. lol

Then again, I don't think I had SSAOW installed at the time. :S

If the harvesters get 'lost' put the .lsd in the file, that contains the waypaths.

Guard towers etc are in the .ldd file.

you need the map_name.ddb to store local edits you've made to each map, i.e temp presets you've created.

But to view those temp presets you have to rename the file to temps20.ddb and put them in the presets folder for the map.
