Alright, When I try and Install Renegade, Everything is fine.

But when i have to download the required patch, it goes to 100% and freezes....the game isnt scratched and ive tried three times uninstalling it, and reinstalling it.....any help?

SS If you want?

Actually, come to think of it....my windows firewall asked me to block it or unblock it when i was FIRST installing the patch...

could it blocking it a second time?

And if so, how do i turn it off.....

This is normal nowadays. You need to download the patch manually [ftp.westwood.com](ftp://westwood.com)

If you are using the auto-updater just click cancel when it gets to 100%, it will still install it. The auto-updater is a bit buggy... always has been

Hmm same thing is happening to me, except when I try and download the patch..it tries to locate the server but nothing happens, always stuck at 0 of 0 files downloaded.

And the reason why I re-installed is because the servers wouldn't pop up, everytime I tried to play multiplayer the server area was blank.

Any help to either problem would be much appreciated.
