I have a buddie that wants to play renegade with me but he is running an i-mac. I know nothing about macs so i was hoping someone here knows. He cannot open .exe files. I have been reading up on something called stuffit expander it says that it will open .exe files on a mac. Anyone here running renegade on a mac???? IF you are can you please tell me how u did it???

Try running Cider

- I used it's related product called Cedega and got Ren running on Linux without much hassle. The only thing that doesn't appear to run is Renguard.

On Linux you can use Wine however I am not sure if there is a version or equivalent for the Mac.
