hey i need help i got my skins mixed up bow my ion cannon beam is red (the big one) and the four little ones that follow are greenish
how do i fix it?

and

i need to find a nuke explosion skin to blue and if there is a sky skin that makes the sky blue or green instead of red when a nuke is planted

The sky's color is changed through the engine, not skins.

And remove any skins from your current data folder to see if it fixes the Ion problem.

Get a dds viewer from game-maps.net in Renegade files section.

Good idea?

Whats a "dds viewer"

Can you use lay-mans language in support of "dds" cause I dont know what you mean although Im trying to learn.

Of course i can use "lay-mans" language, if i knew what that was.

The .dds file type is an image that is used many games, they are the only texture files in Renegade that support alpha channeling (translucent glass, bits of fence are see through etc).

Viewing these files is hard unless you use a special program (imagery editing software).

There's a small app (here) which will allow you to view .dds images in explorer. This is mainly for people to see what .dds file from renegade is what particular image.

If you don't understand that you need to take some lessons in the English language
