Hi i seem to have some probs to get Rankings on my website to test. Can someone put here an answer for it.

I Put in ranks.xml the ftp server, username, password. I put it enable. Bu I see two sentences with a input for a path. What do i have to fill in those two? And do i have to give the output file a name and where do I do that.

Thx in advance

Regards

Red

If your using the HTML output mode on the ranks plugin that came with brenbot 1.50 you will need a templates folder, and a template for it to use. I forgot to bundle those with the installers. Download the file attached to this post and extract it to your brenbot folder, so the path is BRenBot/templates/index.tpl

The output file name will be the same as the template file name, so if you rename index.tpl to ranks.tpl your output file will be ranks.html. Also, you can have multiple templates if you want, and it will process them all.

#### File Attachments

1) [ranks\\_templates.zip](#), downloaded 241 times

Hello Danpaul,

Thank you very much

I will try it out this evening.

Greetings Red
