[View Forum Message](#) <> [Reply to Message](#)

Announcing the RenGuard 1.032 public beta test!

I can not stress enough how VERY IMPORTANT it is for you to provide us feedback about this... EVEN IF IT WORKS FOR YOU! The feedback form is very simple, all we need is a check in the YES box and type in your Operating System.

If it doesn't work for you, it is also very important that we know about it. We may contact you regarding your feedback if we need more information from you.

Click here to provide feedback and download the public beta test for RenGuard 1.032! You will need a RenGuard.com account if you don't have one.

PLEASE REMEMBER that this is a BETA software. Though we have been through a private beta test with good coverage, it is possible that it WILL NOT WORK for you. BACK UP YOUR EXISTING GAME.EXE before installing the beta test!

Wow, I'm so glad that this has finally come out.. Good work to the BHS team.
So.. is there a server setting or something that will make it so that only people using 1.032 can play on the server? Or is this just a test to make sure that all the bugs are ironed out?

[View Forum Message](#) <> [Reply to Message](#)

It's a test. After a certain period, when the team considers there's a 99,99 % chance all bugs are solved, all Renguard clients will auto-update. No more playing with RG 1.031 then, nor with *cheat name removed* , ...

[View Forum Message](#) <> [Reply to Message](#)

I have a long standing account there and it works. I am guessing the problem is with newer registrations. Are the activation emails going out properly?

Also good work getting the BETA out. I will try it tonight when I get home from work.

We have posted BETA5 (Release Candidate 2) of RenGuard 1.032

This fixes a issue with Beta4 regarding stock copies of 1037's game2.exe

Please re-download that and try it out.

Why the fuck is the radar.hack still able to work while you run renguard?

Subject: Re: RenGuard 1.032 PUBLIC BETA TEST
Posted by [Crimson](#) on Tue, 20 Feb 2007 21:45:55 GMT
[View Forum Message](#) <> [Reply to Message](#)

The server's bot needs to be updated to support the changes for RenGuard 1.032. If the server doesn't tell the RenGuard network what the radar setting is, then we can't compare to see if you're using the wrong one.

having finally got an account to register
and downloaded BETA5

backed up my game.exe , extracted the new game.exe to my renegade folder
i fire up the game to be told

"RenGuard is downloading an important update for your Renegade.. Please hold."

45 minutes later its still downloading a 4MB file

wouldnt the answer be to have BOTH game.exe and game2.exe in the download from Renguard
?

Because I like them? The pistol looks cool. (If the goal of the RenGuard team is for everyone to use RG then they might like to approve models so people can use them)

Blazer replied in a different post that they have a ton of requests for w3d files to be aprooved and they need to check all of them to be sure they do not change measurements (implying an advantage).

I had to send a friend my game2.exe (which downloaded fine): after 4 restarts it had started download game2.exe for him but it never finished.

I agree: put it in the download zip .

Off topic. Incomprehensible. And... Wtf? 100 damage with pistol is simply two headshots, it's well known renegade lags, most servers host in the US, so you'll have 200 ping to boot, regardless of your PC.
So, go complain in the right place, thanks for the info over RG though.

1 problem I have found so far, so small that it doesn't really mean much, but still is annoying.

If I ALT+TAB out of renegade to look at say teamspeak, renegade closes and i have to restart renguard.

kinda annoying, expecially if I wanna see who joined teamspeak or see something on IRC

First off, TeamSpeak Overlay. (I'll get a link)
Second, isn't that a alt-tab scripts bug?

Yes, his issue is not related to renguard but to the scripts 3-series. Try the latest scripts release, it solved the problem for me.

As far as I know.

The D3D9 patch or whatever, makes it looks nice, glossy, etc.

But the alt+tab crash bug only happens to people with ATI cards.

nVIDIA cards don't crash (Well afaik) and I had an Ati, it crashed with it, I have a nvidia now, it never crashes on me.

I have had the crash bug with two different nVIDIA cards.

I sometimes have a Crash witch throws me back to the desktop then leaving the RG menu open saying " unable to connect maybe your firewall is incompatible/ blocking it. " When I close RG and I restart it will give the same error again. After a reboot it's all normal again and I can just normally start RG. Will post a SS later.

[View Forum Message](#) <> [Reply to Message](#)

I didn't take the ss like I meant to what really happens is I try and start renguard and then I get that error and renguard closes and renegade does not start and that happens 5 or so times and then it works but it has been quitting on me during a game too.

Quote:I sometimes have a Crash witch throws me back to the desktop then leaving the RG menu open saying " unable to connect maybe your firewall is incompatible/ blocking it. " When I close RG and I restart it will give the same error again. After a reboot it's all normal again and I can just normally start RG. Will post a SS later.

I get that problem too except I can get it working without restarting my computer.

Would it be posible to clean the aim pointer or that the aim pointer won't turn to red when you are aiming someone?

I think that it's the only way to stop with Trigger Bot or Aimbot. I have realized that the new games don't use pointer, but I'm not sure if it's posible to do it in renegade.

if i got you right your original game.exe (renegade) IS the new game2.exe (after installing renguard). so you just have to rename game2.exe to game.exe (or even just start game2.exe instead of game.exe).

installing renguard shouldnt have anything to do with xwis-connecting problems in renegade anyways. i guess its just a temp. problem!

regards ((c)by me @carrierll !)

RenGuard Beta 6 is out!

Bug fixes:

- Registry fixes where settings were not being remembered
- Downloading is now quite significantly faster

We're still working on the radar hack false positives, but you should only be getting kicked when you join or leave a server to the best of our knowledge.

Please visit the Beta Test reporting page:

<http://www.rengaurd.com/community/betatest.report.php>

And follow the instructions to download Beta6. Please provide feedback if you were experiencing any of the listed issues.
