I can only find one link on the internet to download the tools. It works, but it's 25 megs and my browser can't download it because it's too big. Can anyone break it into five (5MB) files or something so that I can download it? I wanted to make mods for Renegade.

Which browser are you using? Neither Internet Explorer or Firefox have limits on the size of file they can download, I often download files over 1gb in size without any problems..
