Posted by [jonwil](#) on Mon, 09 Apr 2007 15:46:04 GMT

[View Forum Message](#) <> [Reply to Message](#)

After a lot of work, 3.2 is finally out.

Grab it from <http://www.sourceforge.net/projects/rentools/>

The (near-final) changelog has been posted in various places for a while now and doesn't need to be posted again here.

I am sure Saberhawk will build an installer for this sometime soon.

<insert respect aimed at jonwil here>

lol you should update this in your readme

Quote:Installation:

Go to your *\Westwood\Renegade\ Directory, and rename the scripts.dll to scripts2.dll
Unzip Scripts.dll into your *\Westwood\Renegade\ Directory.

bye now, trying to get this to work..

Bad News I have found an error if you use the console exit command...

As long as it pops up on top your okay, but if it pops up under the game window, you have to go invisible dialog box hunting.

File Attachments

The exit problem does not occur at my computer, but then again, neither do all the shader effects. I made sure they were enabled at the options menu. They worked before, and i double checked if all the files were in place.

Meh, ill wait for the installer, too many files to make sure i didn't just miss one.

All .FX files and both shaders and scene_shaders appfix packages go into the data directory. The rest of the dll files go into the game directory.

Same as OWA, mine crashes on the intro movie. The screen goes blank, you hear about 1 second of the background music for the EA / WW logo screen (but no picture), and then it crashes to desktop.

Crashdump attached, exception in shaders.dll

you should put the normal maps inside the data folder.
they are the dds files that came with the scripts.
i also took a look at the flame tank, only the right side seems normal mapped.

Attention Jonwil

Okay, I thought the problem was with a change you guys must have done to the cinematic scripts. But after a closer look I think it must be with one of these scripts:

JFW_Attach_Custom

JFW_Send_Custom_Distance_Objects_Custom

Reborn_MMK2_Turret

There are a few other script that it could be but these are the most likely, attach them to an object (like the default starting infantry) and if the game crashes you have found the flawed script, it use to work before 3.2 but now I am having problems on tons of levels. If I had more time I would see which script was causing it, but now I have to leave for work.

OK, so I fixed the weird arrows (thanks Slave), but it's kinda slow now. I thought there were supposed to be loads of performance enhancements, that may even make it faster than stock Renegade? 'Cause over here I get 75fps average on 1280x1024 and 25fps average with shaders enabled.

Also, I'm guessing the only vehicles that have the fancy light effects are ones that have been mapped, or something, which would explain why nothing seems different when I put it in APB.

[View Forum Message](#) <> [Reply to Message](#)

Only the mammoth and flame tanks have the normal mapping. If you don't want it, delete shaders.sdb.

The guy who reported the slowdown, please post your system specs here.

As for all the various crashes, I am going to look into them and figure out just WTF is going on. Beta testing WAS carried out on various builds of 3.2 (including a bunch of testing alongside the APB 994 betas).

Working on scripts.dll 3.2.1 right now. Changes so far:

1.Fixed a bug that would show up if you used certain hud.ini keywords or engine calls (basically anything that uses Render2DClass)

Updated the readme to reflect the fact that crashdumps are now numbered and the other readme thing mentioned up in the thread.

Moved 3 memory allocation statements so that they run even if shaders is off (fixes a major bug).

Yes, this is the "Renegade crashes at the intro movie" issue.

the EXIT console command works just fine on my WIP build btw.

Jonty, what are your system specs? If you have a crappy video card, it may explain why its slow.

Subject: Re: scripts.dll 3.2 is out

[View Forum Message](#) <> [Reply to Message](#)

jonwil wrote on Tue, 10 April 2007 08:58Jonty, what are your system specs? If you have a crappy video card, it may explain why its slow.

Well, I have a Sempron64 3400+ with 1.5Gb RAM and a 256Mb GF6200, which I know is hardly the best specs nowadays, but my friend just installed them on his PC with an FX5700 (Microstar or something odd) and that runs at about 40 fps, same resolution.

And I just realised I double posted up, there, blame the database lock thing.

Anyway, like I said, is there any point in using this for APB? Because I plonked it in and nothing changed.

[View Forum Message](#) <> [Reply to Message](#)

I am working on finding which script is crashing the game.

Never mind it would seem that it crashes whenever a certain effect on a model happens, so I guess that may computer was correct in saying it had to do with shader.dll. I will figure out what effects have to be applied to cause this crash.

Subject: Re: scripts.dll 3.2 is out

[View Forum Message](#) <> [Reply to Message](#)

Attention Jonwil

Okay, I figured it out, the game crashes when ever "scale" (in the UV mappers) is used. Its not your scripts. Which would explain why it always says that it is shaders.dll. It even crashes if you leave the scale at its default.

If you still want a package tell me, I will have it done in 15 minutes. Oh and my system info is also below.

Adding more normal maps?

I tried (together with some other people) to add normalmaps for the pistol and the GDI APC. We quickly rendered some normal maps and tried to add them to the game with the sbhedit. We used values from the mammothtank entry (execpt the .tga normalmapfilename of course) but the normalmap didn't appear ingame.

The 'name' of the shader in sbredit is important when trying to do that. You need to make sure that it is the same as the 'material name' of the object you are trying to put the shader on.

Uh oh, I found a visual error.

On foggy maps, the flame tank and the mammoth tank stick out of the fog like black on white...

If you line a bunch of vehicles up including the flame and mamm, you can see how the fog starts to engulf the other vehicles, but the flame tank and the mammoth tank just stay visable. They don't get over taken by the fog.

I will post a screen shot in a min.

[View Forum Message](#) <> [Reply to Message](#)

Unfortunately, that is "by design" for right now. On SM3 capable cards, fog simply doesn't work with shaders of any kind, causing it to be the fog color all over no matter where it is. So rather than fix the fog, we just disabled it (If you know how to calculate fog that matches in HLSL, be my guest to add it).

It works on some of the computers, just look on ren alert forums, that is defiantly a vista operating system that is crashing on the exit console command.

<http://www.apathbeyond.com/forum/index.php?showtopic=12501&st=30>

I think you are wrong, that's WIN XP

It's a bug caused by d3d8.dll

Has anyone tried to make a normal map for the Nod APC? I tried and it crashed when it spawns...worked all nice when I made a normal map for the light tank...

I just found an error in the singleplayer which is probably caused by the scripts.
At the second mission (after Scorpion Hunters) when I click on vehicles under the pause menu,
Renegade just quits to the desktop without any crash messages. No crashdump was generated.

APC...crashdumps included for reference.

Found, fixed. The Nod APC has a two pass material that has no textures one of the passes, which
causes the crash. Might be a good idea to change that.

You guys are one of the few modders that I respect...making Renegade nicer instead fucking up
the gameplay/working on mods that 10 people care about like those other douchebags.

Will you add more normal maps in later release? Those look kinda neat.

Saberhawk and jonwil are douchebags that make mods that only 10 people care about too, don't let this fool you!

1) as this is my first post I want to thank jonwil and all the other people involved in the scripts.dll project for your continued efforts in keeping this game up-to date and adding new features.

2) I got the same problem as that other dude, my FPS are halved with 3.2.1 while all was working fine with version 3.1.4.

It's not only that FPS display that says that, but it's easily visible. What I think it's that it is exactly halved, so I guess it's not a performance problem but a bug.

The odd thing is that when I reinstalled v314 again to fix it (via the installer provided in this forum) I had that same problem again. How I fixed it? This way:

- I ran renegade and open up BHS.dll options screen, the shaders and high-detail shadows options was disabled
- I re-enabled those options (I keep vsync always off) and pressed Save Settings, then I exited ren and then reloaded: problem fixed.

So I thought that has something to do with saved settings, but I'm not sure, if you can tell me where it saves them I can check what option halves the fps.

My system specs:

Athlon XP 2400+

768Mb ram ddr 266MHz

Radeon X1600pro 512Mb - Catalyst 7.2

my CPU got SSE so there should be no problems with those new SSE optimizations.

I start Renegade via direct connect - whatever I use (ren IP, server launcher, IRC script etc) it stops on "Joining Game..." I I minimise, then restore using alt+tab and i get a black screen with this in the middle:

Maybe i should just get someone to post an older version of the scripts?

You can find all of the older versions of scripts.dll at this subpage of jonwil's Renegade Public Tools page. Version 2.9.2 is the last completely stable version that I've used.

No problem. By the way, I'm not sure if it's happened to me since then, but according to my IRC logs, my client chat logging somehow turned itself off when I installed scripts.dll 2.7.0. Just in case, remember to hit F8/~ and type "log 1" to definitely enable logging. You can also type "logp", which will just tell you whether logging is on or off. Thanks jonwil for telling me about those console commands last year

Did you use the installer, or get the files from the zip archive? If you didn't use the installer you probably need to update your directX setup to work with the new scripts, which you can do using this setup program ->

<http://www.microsoft.com/downloads/details.aspx?FamilyID=4b1f5d0c-5e44-4864-93cd-464ef59da050&DisplayLang=en>

(Does 3.2 even have an installer yet anyway?)

Yes, 3.2.1 have already an installer with built-in DX setup.
