I am having problems with Brenbot locating files i am not shure why!

Can anyone please help me???

Please see attached image!

You must first go in the brenbot directory before running it in the DOS prompt.

So first cd c:\blabla\brenbot

Then run brenbot.exe

Ok thanks but there seems to be a different error now (please see below)

Anyone know what to do about this???

Looks like your firewall is blocking the ports BRenBot uses to communicate with the RenGuard master servers. Either that or your IP has been banned from the RG master servers (Not even sure if they have a banning system, just theorising here)

Oh, and when you use cd/shortcut to go to the folder you can just type brenbot, no need to enter the full path again

Error 11004 in your GameSpy error means the DNS could not be resolved, which does suggest your firewall is blocking things.
