Hello ,

Recently i got some problems with renegade ,
Or the game shuts down suddenly to desktop (this happends like 3 minutes after I am ingame)
or 2 I get a blue screen without any error message and I have to shut the system down. I have
never encoutered any problems like this on my laptop yet

Centrino Pentium M 1.6 Ghz
60 gb HD 7200 rpm
Ati radeon 9700 mobile (128 mb)
1 Gigh ram

Anybody knows what this could be??

thx

Could you be more specific?

Blue screen as in a BSOD http://www.gadgetgarden.nl/bsod.JPG

Or do you mean the Renegade blue screen/gray screen which happens from time to time when
you enter a vehicel.

And does it happen in other games aswell or just Renegade?

Yeah blue screen like that but then no text , the total screen is blue and I have to pull the plug or
hold the power button to get it fixed. I havnt tried any other games because renegade is the only
game I have installed atm , Iam gonna install some games tommorow and gonna check if the
same thing happenneds

iso for the win.

As for the blue screens there is no text at all as in just a blue screen?

Do errors occur aswell when your in Windows and not gaming?

Did you make any hardware changes/major software changes?

To bad you don't live close else you could bring it over here

No text, interesting, every BSOD I've ever had has had text. it's likely to be overheating.

bump?

Is it fixed or did that guy's pc burn out?

Its fixed , One of my memmory barrs was corrupt , I can play now but only with 512mb ram. But the good news is I'am getting a new laptop for my education and its going to ship this week

Thx for the help al
