Hi,
i have Renguard 1.032 "Beta 6" istalled, because the "normal" renguard seems not to work with my winXP x64 version ...

After the corepatches were downloaded i started renguard again, but the downloader started agein to download...

it downloaded these 3 files:

mirror.txt readme.txt. patch.txt

Now i can start renguard as often as i wish, but it always downloads these files and then closes the application afterwards.

What can i do to fix it?

The Renguard window should output something either in the main screen or the status window at the base, is it? I can also recommend the manual Core Path installs here:
