Subject: RenGuard version 1.032 released!  
Posted by [Crimson](#) on Tue, 24 Apr 2007 18:11:48 GMT  
[View Forum Message](#) <> [Reply to Message](#)

---

RenGuard version 1.032 has passed all beta testing and is now available as a MANDATORY forced upgrade! When you launch RenGuard, whether you are using version 1.03 or one of our beta test clients, you will automatically be upgraded to version 1.032.

PLEASE NOTE: Vista users must accept/allow the upgrade before they will be allowed to connect to the network. If you don't allow the update, you'll be stuck in an endless loop of the update trying to apply itself.

This version works 100% in ALL operating systems. There is no longer any excuse for 64-bit, Vista, or Windows 2000 users to not use this software.

I've also heard a rumor that a new version of BIATCH will be released by BlackIntel today.... stay tuned for that.

If you are having any trouble with auto-update, please download this ZIP and manually update yourself.

Is there a full installer for 1.032 or do we have to install the old version and update it? I recently reformatted my PC and have not installed RG yet, so thought I would ask

Auto updater doesn't work correctly. DOH. It keeps updating, even after saying the update was succesful.

I use beta6.

We made a couple tweaks... it was almost painless. Any game.exe that you connect should auto-update to the right one now.

I have a problem.

---

The forced update now requires me to insert the runtime disc that I no longer have!

I tried installing the no-cd patch but renguard will not run after it.

I can play without renguard but don't like to.

Any ideas?

That shouldn't happen because the game2.exe that is forced doesn't require a CD to be inserted...

If you're having any trouble with the automatic updater (there are only a few of you), try downloading the new version manually and updating it.

Major probles with this update for me!!!!

I keep having the WWConfig utility popping up, Renguard won't start, and when it dose won't stay connected.

An error occurred within RenGuard. Please report this error: rcv - 10054 is what came up the first time!!!! I've tried reinstalling Renguard SEVERAL times and it still doesn't work!!!

Quote:Its primary purpose is wider compatibility (Now supports Win 64 and 2000) and stopping the bypass / aimbot

This would be fine if that's all it was.

But instead, RenGuard is also forcing (downloading upon load without consent or permission) CP1 or 2 onto players.

Don't get me wrong: I appreciate the work of the CP1 developers.

But, why should we players be obligated into the extent of extra's and modifications CP1 (exclamations over my and others heads - blocking my and other's views, noisy sound effects that cover up important sounds and add to all the repetitious commands of other players, along with all the other "un-necessary to gameplay" extra's) includes, if we don't want it??

If players found it to be usefull - would be one thing. But we have never been given a choice. I've been playing since late 2001, and never thought it come down to the developers of a anti-cheat program making up rules on what you'll have added to your Renegade Client, in order to play. RenGuard was initially embraced by all of us to stop cheaters, not force "MANDATORY" alterations.

Has the REN community come to a monocracy?

This is no "upgrade"! \_\_\_\_\_ But rather a downgrade.

RenGuard by itself is GREAT, and I'm all for a program that stops people from cheating. But, using RenGuard to implement CP1 use is wrong when it so dramatically changes the gameplay. I know I speak for many hundreds of voiceless players.

Mjolner

Erm... the forced update is forcing you to update from 1.03 / 1.031 to 1.032 AFAIK, I don't think it also forces CP1/CP2 on you...

setting...

Ok FINALY it worked, manual update did work BUT Only after I turned off the Auto-Start Renegade in the Options menu! This was tricky The WWConfig Menu popped up 8-12 times. I had to "Break the loop" by maximizing RG, clicking options, Uncheck Auto Start, and then Click OK, BEFORE the WWConfig came up again.

That seems to have fixed it

My RenGuard doesn't actually open now. I get "RenGuard 1.032" minimized in the taskbar, but it doesn't open the RenGuard front-end on the desktop, so I can't start Renegade. If I click on the taskbar box, nothing happens. If double click it, it goes to the notification area by the clock, then if I double click that icon, it goes back to the taskbar.

You can also go into your registry (Start -> Run -> Regedit), browse to HKEY\_LOCAL\_MACHINE\SOFTWARE\RenGuard and Edit the "Bottom", "Left", "Right" and "Top" values to anything between 200-1024 or so to make the RG window display normally again.

You probably have "Automatically download CP updates" or whatever its called, enabled. Make sure you deselect that if you don't want CP updates.

Btw, I've played this game for years and in lobby wars and pro clanwars - and I've never had a complaint about CP2.

If you have problems with this new RenGuard wanting to download the core patch even though you have already got it installed, grab the .reg file from this post and double click on it and select "add to registry" (or whatever windows says).

Changes were made to where RenGuard stores information in the registry for some reason related to Windows Vista so now it doesn't think CP2 is installed when it is. This registry file writes the information in the right place so the new version of RG now thinks CP2 is installed.

<http://www.renegadecommunity.com/page.php?link=rgfaq#14> (at the bottom)

I'll add the RG 1.032 download link and the registry file download link to the RGFAQ now.

Maybe I was unclear when I said I had already patched in manually.

Thanks to mac for the game2.exe link, fixed the last one RG downloaded for me that was a

whopping 0 kb. Maybe that's why it doesn't work?

Now, even with both patches manually installed it keeps running the pre-core patch check and finds errors even though I downloaded every map and always2.dat through the RG window.

Maybe you guys should get this thing working before you claim it is 100% compatible.

Looks like you are using Vista or something - the CP installer couldnt save its registry value to indicate its installed it.

Go to the registry, find the RenGuard entry, and set PatchVersion to 2. That will fix it.

So you are saying that even though we downloaded the new game.exe, we have to download a game2.exe?

WTF do we need to download a new game2.exe for? I already had enough problems downloading the game.exe file/update.

Are there anymore things that we are going to have to update??? It's a pain in the butt when you think you are all set until the next update a while off, but the next day, renguard doesnt work again.....

Lovely. Just lovely. I mean, dont get me wrong, I support you and your work, but i think that you should release A major update forcing everything you want updated, updated. Not forcing 2, 3 small updates at a time.

=====

Crimson wrote on Tue, 24 April 2007 18:36It's NOT downloading CP1/CP2. It's downloading a unified game2.exe whose only modification is that it removes the need to have the CD in the drive when you play. We needed to have everyone use the same game2.exe for memory hack enforcement.

This is NOT a core patch download, it's ONLY a game2.exe download.

You dont need the CD in to play already. You just click cancel when the prompt for the CD comes up. The CD only contains the SP and Intro Movies. Playing the game now without the CD is just the same at it will be after this update. I play with no CD all the time, and i have an original copy of renegade.

Thank you very much,

b2412 (The Dead 6 Gaming Community Lead Admin/Owner)

Currently adressing this issue, the load on the servers is incredibly high, which causes instability. Fixed it for now.

I love you all and the effort you are making, but this doesn't seem ready for release. Nothing is fixed. I'm watching peeps 6 to 8 at a time being kicked for rg not running any more. They don't know it is the rg server and not ours. Then I get yelled at and our community blamed. I have gotten more pms just tonight than I do in a week. Personally I can't stay in a game more than 5 mins without it kicking me for rg stop running. I've given the enemy 4 vehicles already.

In addition, if I go away for a long period ren exits, goes back to the rg screen with a "not compatible with your firewall" error message and I have to restart my pc to get back in.

Not sure what changed other than more users on 1.032 but I never had this problem as a beta tester. Only since the release.

Good luck

can't play a single map without renguard stopping running and getting kicked from servers

Currently adressing this issue, the load on the servers is incredibly high, which causes instability. Fixed it for now.

I love you all and the effort you are making, but this doesn't seem ready for release. Nothing is fixed. I'm watching peeps 6 to 8 at a time being kicked for rg not running any more. They don't know it is the rg server and not ours. Then I get yelled at and our community blamed. I have gotten more pms just tonight than I do in a week. Personally I can't stay in a game more than 5 mins without it kicking me for rg stop running. I've given the enemy 4 vehicles already.

In addition, if I go away for a long period ren exits, goes back to the rg screen with a "not compatible with your firewall" error message and I have to restart my pc to get back in.

Not sure what changed other than more users on 1.032 but I never had this problem as a beta tester. Only since the release.

Good luck

EXACTLY the reason I just came here to post just now....

...I'm having the same exact issues on our server. As I stated in a different post, I had to remove the 'Full RenGuard' setting and put it on Half - but even this isn't helping. People are still mad-dropping and thinking its our servers' fault. I'm guessing it has to do with how the client and server are connected cuz people join with rg and are accepted, then drop because they lost connection to the rg network.

Guys, if EA has problems due to serverload after releasing a game like C&C3, then how do you expect BHS not to have similar problems? There has been a beta test but you cannot compare a load of 1.000 with a load of 50 testers unfortunately.

If you use Windows Vista, then you will have to run RG in admin mode. That's a matter of actually knowing how to work with your OS.

The drop network problem is solved for now, until we can fix this client side. Has to do with x64 and vista compatibility which fucks up memory reading. Havent seen drops for hours now.

Thanks mac. BTW I do not use Vista or x64 and it disconnects and kicks me. I ended up having to stop using it to be able to stay in the server.

The servers are a little unstable at the moment, probably due to the amount of clients downloading the updated files. It should be more stable once everyone has downloaded the updates.

We believe we have finally fixed this problem. It had to do with the auto-reconnect code in the new version. We have updated RenGuard.com to show the new installer which Ghostshaw put together.

Note: The new installer fixes problems with The First Decade users!

when I try and start RG now from TFD menu the menu just disappear for a sec or so and then reappear with nothing else happening at all. If I do however go into the folder and start from there or a direct shortcut to it it works fine, but I am used to using the TFD menu, why does this happening?

it has come down to doing a complete uninstall of renegade and renguard. i have successfully downloaded both. i go to join a game through GSA and the screen shot tells the rest. any suggestions.

<http://img373.imageshack.us/img373/1955/renhf5.png>

i have the original renegade not the new decade pack. and not the demo.

i do have another computer where i have not uninstalled renegade but i did uninstall renguard. after reinstalling rg and try launching a game from GSA i get nothing.

this has really become a hassle. i don't understand how some are playing and some are not???

skip the bad corrupt file thing i reinstalled renegade again and that fixed that. w00t!  
not out of the woods yet. i get the rg dialog box, i click on renegade and the rg dialog box just flickers. it will not launch game???

the other computer decided it would work. computers are a beautiful thing but sometimes i would love to take a sledge hammer to them.

any suggestions on comp 1??? thanks for your time.

Maybe a long shot, but did u try a reboot?

Did you have scripts 3 or higher installed and installed core patch 2? It seems core patch 2 overwrites with their old scripts, causing a black screen. The solution then is to reinstall scripts 3 +.

0x90@LOLCHEATERFORUMrenguard is (still) bypassed since the first 1.032 beta and so is the current public version.

i just promised mac and blazer to not release another renguard bypass, neither public nor private.

---

please just keep that in mind!

anyways i respect all your work big time! one can just salute you spending so much work on a almost-dead game! seriously.

0x90

Is this correct?

Does it matter? Either way, there's no public bypass at this moment and there shouldn't be one soon (from 0x90 at least).
