RenGuard version 1.032 has passed all beta testing and is now available as a MANDATORY forced upgrade! When you launch RenGuard, whether you are using version 1.03 or one of our beta test clients, you will automatically be upgraded to version 1.032.

PLEASE NOTE: Vista users must accept/allow the upgrade before they will be allowed to connect to the network. If you don't allow the update, you'll be stuck in an endless loop of the update trying to apply itself.

This version works 100% in ALL operating systems. There is no longer any excuse for 64-bit, Vista, or Windows 2000 users to not use this software.

I've also heard a rumor that a new version of BIATCH will be released by BlackIntel today.... stay tuned for that.

Apparently I'm not alone, but this is not installing properly. Then it says to manually download the patch. The only download I found is the old rengaurd. Help us all please!

Works great, thanks!

Looking forward to BIATCH release.

edit: running 32bit XP SP2

euhm it doesnt work for me i think ./ i downloaded RG again from the renguard forum. But it still slow @ starting/joining a game o.O is that my comp or... And if its my comp i know there is a script for it, would someone be so kind to gimme a link to that script where i can download it

Greats,

Dave

[www.4camp.net/scripts314.exe](http://www.4camp.net/scripts314.exe)

I recommend this version . You could also simply install core patch 2.
