Now that I was FORCED to update Rencrap. I get the incapatable firewall msg. Never had it before. Happens while I'm playing. Also ALOT of renguard disconnects now. Maybe it wasn't a good idea to release it yet.

There has been some serevr overload yesterday, hence the disconnects. This is being adressed.

Did you actually check your firewall to allow RG? Do you have Windows firewall on? It sucks quiet a bit, you know.

That message indicates that the server(s) are experiencing problems, and are overloaded. Just try again.

My firewall is always off. This issue only started after the update. I'll try again later tonight.
