The newest version of RG gives some problems for The First Decade users.
"Ghostshaw"There seem to be some issues with the TFD serial fix. I'll try to get them fixed ASAP.

In the mean time, you can delete woldata.key from your rene dir and change the registry entry:
HKeyLocalMachine\Software\Westwood\Renegade\Serial using regedit, to a numbers only
version of your serial(so just remove the (-) signs and type it in there) that "should" work.

If you don't know, I strongly suggest you wait. Mistakes in the registry can render a PC unusable.

The current online installer doesn't have the problem(i disabled it). That registry key is completely
safe to change it only affects renegade.
