I have tried to make it so i can put teleporters in map but i CAN NOT FIGURE IT OUT. I have installed the scripts(it is probably wrong but i can't fix it)alot of times but whenever i go to the scripts thing to add the teleport there is nothing on the list. I followed the tut on ren help, my friend has tried to help me but still nothing. I really need some help.

If i have made something not clear please tell me.

Create a folder called Scripts in your Level Edit projects file (Level Edit/myproject/Scripts) and copy bhs.dll, scripts.dll, scripts2.dll, shaders.dll and d3d8.dll from your Renegade folder into this new folder.

I tried that. It didn't work. I am pretty sure those are the right scripts. Do they have to be installed on ren? Cause they're not.

If your using Jonwil's updated level editor they should be installed on renegade and you do not need the scripts folder in your level edit project folder.

Oh, and if you don't have them installed on your renegade you wouldn't be able to test your map/mod anyway

EDIT: You have to restart LE after copying the files for them to showup I think.

That one loads the dll files directly from the game-dir if im not mistaken. So the dll's must be in your game folder as well..

Really? Cause it works for my friend and he is running 2.9.  
I tried to install the latest scripts but when I did ren wouldn't start.

:/ Which did you use? the location version or the object id version? (Hint: The object ID version is easier to learn.)

To make this work, you'll need to make a scripts folder inside your mod folder.

1. You need the Object ID of the object you wish to teleport to.
  - a) Place an object where you want to teleport to (Use "Dave's Arrow"; also place the arrow a bit off the ground to avoid being stuck in the ground when you teleport)
  - b) Double click it and get the object ID. (Write this down!! Example: 11203)
2. Next, go to where you want the teleporter.
  - a) Place a ScriptZone\_All where you want the trigger to be where you teleport.
  - b) Double click it and go to the Scripts tab. Add/Attach the script TDA\_Teleport\_Zone
  - c) Parameters:
    - Name: "Object ID"
    - Value: "11203" (or the ID from 1b)

There ya go!

-Thanks,  
MathK1LL

Posted by [Genesis2001](#) on Mon, 30 Apr 2007 23:31:31 GMT  
[View Forum Message](#) <> [Reply to Message](#)

---

Then....You didnt make the 'scripts' folder inside your mod folder.

\*see attached image\*

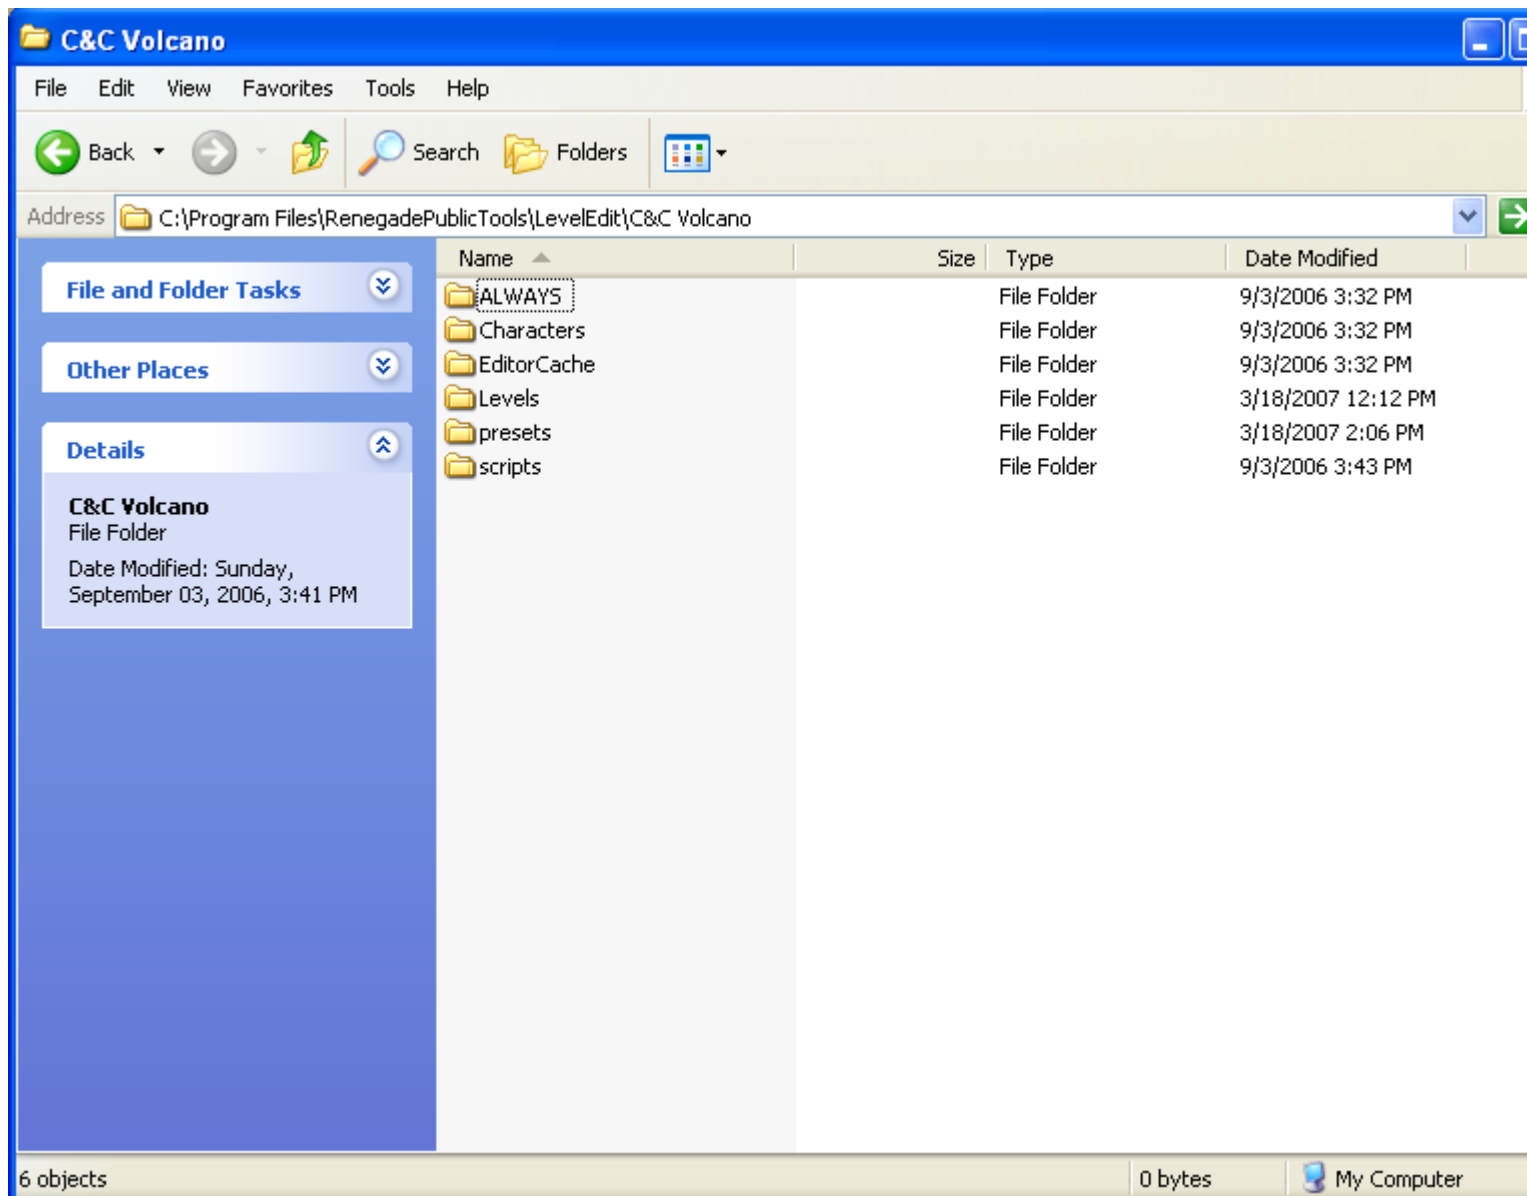

-Thanks,  
MathK1LL

EDIT #1: I only have scripts.dll and scripts2.dll inside the scripts folder.

EDIT #2: Also, The "C&C Volcano" part is supposed be your mod folder...

If scripts.dll and scripts2.dll are in the 'scripts' folder, then yes...

\* Note: If you put the DLLs inside the 'scripts' folder whilst LE was open...Restart LE if you haven't already.

I found this file on one of my old post, it should get you where you need to be:

<http://www.renegadeforums.com/index.php?t=getfile&id=1020&rid=996>

EDIT:

Assuming you have Jonwil's Leveledit installed:

[http://www.renhelp.net/downloads/LevelEdit\\_Jonwil.zip](http://www.renhelp.net/downloads/LevelEdit_Jonwil.zip)

EDIT2:

And that you have the latest scripts:

<http://4camp.net/scripts322.exe>

Well that teleport example thing you posted didn't really work cause there is still nothing in the list. Does it matter where ren public tools is saved? Like does it have to be in Renegade or Westwood? The only way I can think that this will work for me is if someone sends me a correct mod folder.

Install those scripts, then replace the original leveledit.exe with the version made by jonwil.

Load leveledit, it will now read all the scripts directly out of the renegade folder so there is no need to copy/paste them in mod packages anymore.

Load the map in LE and look at the script zones to see what i did with them to make them work.

Several things can cause this

1. Are you using the first decade edition of renegade?
2. Did you copy the entire folder into your leveledit directory?
3. Renegade regkeys are not installed properly (fix with clean install)
4. Did you try to open the map from another location other than your leveledit directory?

I did check this example level and it works fine, we will get you setup just put up with up for awhile.

Basicly put, that "Missing Presets" error is saying "Your map contains presets that i can't find the presets tree (large area to the right). Please select the location of these presets or do without them." Unless these presets mean alot to you it's not much to worry about since it will most likely not work ingame anyway.

In order to let me help you i need to know a few things:

1. Are you running Renegade from The First Decade game pack?
2. Have you attempted to reinstall Renegade Public Tools 2 to its default directory?
3. Is the registry key for LE to gain what it needs from the game correct? (by default, with TFD it isn't, it will need manually changing. Go here for a tut on how to fix that. The line that looks like this: (C:\Program Files\EA Games\Command and Conquer The First Decade\Command and Conquer Renegade(tm)\Renegade) should be like this: (C:\Program Files\EA Games\Command and Conquer The First Decade\Command and Conquer Renegade(tm)\Renegade\))

With these we can pinpoint more of an answer to your issue rather than shooting in the dark on trying to find your problems.

Chances are you made a new preset, placed it on the map, and saved, and quit without saving the presets. All you need to do is remake the presets with the same name.

Welp i connected to his computer and i have no idea what is going on there.

Checklist:

Using Standard Regegade with Custom Scripts - check

Check Registry for install path - Check

Made sure that the Scripts2.dll was the original renegade scripts and that scripts.dll was jonwils - check

Copied the scripts to a mod package the old fashion way - check

Used jonwils new LE for reading scripts - check

Disabled Visual Themes on both leveledit versions - check

Reinstalled the renegade public tools - check

all of that and it will not read scripts but it does pull the preset correctly.

Im out of ideas.

Try use the original leveledit.exe

I dont know why people prefer having the dll's loaded from their game dirs really :S  
Especially when you mod for a server you want to have the scripts.dll and bhs.dll from SSAOW loaded in leveledit, not some scripts version that was created at a later time because newer scripts maybe work in leveledit but wont on the server because the scripts.dll is an older version in ssaow.

Anyway, try the original leveledit.exe and put the scripts in the moddir\scripts\  
That just basically must work, also disable advanced text services for leveledit.
