[View Forum Message](#) <> [Reply to Message](#)

Note that this version will NOT function on Windows 98/ME

Get it from <http://www.sourceforge.net/projects/rentools/>

Changelog:

Changes to the normal map shader to fix most of the bugs (including having the correct set of default values)

Fixes to a few places where Get_Data_File is called but we don't check the return value is non zero before we use it

Changed all places where we display a message box to use NULL instead of HWND_DESKTOP for the parent (per what I saw online, NULL is the right value to pass, not HWND_DESKTOP)

Added more code to check for the existence of the various dll files and print an error if they aren't there

Added code to use FormatMessage to make the errors in dllload.txt easier to follow

Added code to prevent accidentally double deleting objects if DestroyEngine3D is somehow called twice.

Fixes to the Tangent/Binormal generation code (it still has the black triangles on some objects but its as good as its going to get unless some math guru can find the problem)

Added code to prevent the dll from running on Windows 98/ME (that way you get a nice error message, not some random weird windows error when the dll tries to use a feature thats not available on windows 9x)

Code for the Matrix2 class

Bug fix to functions in Engine_Net.cpp that obtain an IP address

Bug fix to Get_Vehicle_Mode to always return the mode of the vehicle, even if the passed in object is the driver of the vehicle

Bug fixes to Find_Object_With_Script

Bug fixes to StringClass and WideStringClass

New code to handle saving and restoring a render state inside a shader (i.e. to save and restore fog properly)

Bug fixes to JFW_Kill_Message_Display

Bug fixes to JFW_Sell_Zone and JFW_Repair_Zone_2

Bug fixes to the ExpVehFac logic in mdbevf.cpp

Fix to shadermgr.cpp so that per-map shaders.sdb files will work correctly

Added code to shaders.dll to detect if d3dx9_30.dll is missing and if it is, display a usefull error

Added code to prevent accidentally deleting stuff in shaderstatemgr.cpp twice

Fixes to several crash bugs

Fixed a crash that could occur with objects with a certain texture mapper used on them

Added fixes so that GetExplosionObj works correctly for buildings (and will detect nuke and C4 blowing up buildings)

Fixed a crash bug that could show up with the single player encyclopedia

Cleanups in Do_Recieve_Data_Sc

A fix to the EXIT console command (hopefully it wont crash the game anymore)
Fixes to the sidebar code
Cleanups in Do_Recieve_Data_Cs
Code to correctly disable backbuffer locking (fixes a couple of ATI issues)
Some code changes to prevent crashes when running inside PIX
Code to so that scripts.dll is no longer read from a mod package

I am sure an installer will be made for this soon

Please make the installer now.

Oh, or you could just put a readme in that full download so that we know what to put where and we don't need another installer, ever.

One more bug:

When shutting down a Linux RH8 server using the QUIT command, a SIGSEGV occurs in ScriptFactory::SetNext. Looking at the stack trace, the function was called recursively more than 200,000 times!

[View Forum Message](#) <> [Reply to Message](#)

When will we get a complete set of normal maps? They're sweet, but it's kinda strange when only 2 vehicles out of 17 use them.

Oh and 3x and 4x anti-aliasing makes my Renegade crash after loading the map...why is that? I have a GeForce 6800, 512mb RAM, Athlon xp 2400+...could it be that my hardware doesn't support those modes or something?

Canadacdn wrote on Sun, 29 April 2007 09:21Does this mean all the normal maps I had set up in 3.2.1 are now useless?

Shaders are guaranteed not to have different SDB requirements between bugfix versions. The default settings in sdbedit.exe for the normal map shader in 3.2.0 and 3.2.1 however were wrong and the proper defaults were put in place.

hog654321, JohnDoe: Upload the latest crashdump.txt that you have.

My scripts2.dll. Works for me.

Hope it works for you!

You will need winrar (<http://www.rarlab.com/>) to extract it.

@John:

I'm not 100% sure but as far as I can see, VehicleGameObjInit from bhs.dll/so is never called and your IsVisible-variable remains uninitialized (at least on Linux).

[View Forum Message](#) <> [Reply to Message](#)

There is a bug in "Get_Beacon_Planter". When it is called, it hangs the FDS and uses 100% CPU. Like if you create in infinite loop.

Subject: Re: scripts.dll 3.2.2 is out
Posted by [slavik262](#) on Fri, 04 May 2007 03:05:24 GMT
[View Forum Message](#) <> [Reply to Message](#)

It doesn't lock up. Just when I close Renegade I get the fun little "Renegade has performed an illegal operation and was shut down. Do you want to send an error repor?" message.

Attention Jonwill!

I have found another problem, Alpha Blend seems to have been glitched up, it no longer does transparencies right, it fills the spots that are suppose to be see through with gray (Alpha Test works fine though, actually it always worked better for alpha stuff, but all the same). If you would like to see what I mean, shoot a tree in single player (try level 2). Also, please keep in mine the crash I found with the Random UV mapper.

Please don't forget that the UV mapper "Random" is crashing the game.

[View Forum Message](#) <> [Reply to Message](#)

Just to let everyone know that scripts.dll 3.2.3 is still in progress and will be out as soon as possible.

Still to do for that release:

1. Fix Get_Beacon_Planter so it doesn't hang the FDS anymore
2. Fix the alpha blend issue where alpha blending isn't working
3. Fix the Roleplay 2 issue where switching to team Renegade makes the game crash
4. Fix (if we can) a crash reported by testers for the next APB release
5. Fix (if we can/need to) the LFDS crashes reported by WhiteDragon that came up whilst testing SSGM on the LFDS.
6. Fix a crash reported by someone that has something to do with 3xaa/4xaa
- and 7. Fix (if they aren't crashes that are already fixed) some crashes reported by TomatoSlayer

Can whoever reported Get_Beacon_Planter as broken provide more details (i.e. how they were calling Get_Beacon_Planter, what code they were using, what they were passing to it etc)
Also, can someone on the Roleplay 2 team tell me how to switch to team Renegade or team -2 on that map?

Posted by [Jerad2142](#) on Mon, 21 May 2007 13:44:17 GMT
[View Forum Message](#) <> [Reply to Message](#)

Don't forget the random uv mapper is crashing the game.
Also In the past I have tried forcing the player onto -2 through scripts, and the game crashed (but if you do it to bots it works fine).

Although, if my memory serves me correctly it will work correctly if you use
"Commands->Set_Team" (I think it does not crash if you use this command, but then you can't buy from PT's)

[View Forum Message](#) <> [Reply to Message](#)

With further testing, the "alpha-blend" issue that is showing up is actually in the stock game but many many people don't notice it. scripts 3.2/3.2.1/3.2.2 has simply just exposed the issue further.
