My computer is peace of ****(meat), but it can still run Generals and barely C&C3.

The thing is, only the training mission starts. If I try the demo campaign, the game crashes to desktop. Any ideas?

Buy the game?

Try reinstalling it, make sure all graphics settings are right the way down etc.

Turn your shaders to medium (or higher). That did the job for my other laptop.
It seems that low shader setting cannot render water and you could run the training mission cos there's no water there.

Wow, how do you know I have laptop?

So are you saying that if I have the lowest possible details, I won't be able to play missions with water?

WTF? This is the stupidest thing I have ever heard. But then again, the game was made by EA so things like this are as surprising as a Moonlight.

Anyway, thanks for the help I will try it.
