ok umm i need someone to help me make a script for my CTF please
here are the details

-engies on both sides get dropped off and go around base repairing teammates

-if they died they will drop off more

-they dont repair enemyes

-they dont stand and one spot getting killed over and over

see i dont know ANYTHING about scripts thats why im asking if someone here can help me make this script

idk if u guys add it to the objects.ddb file or another file idk but please can someone help me?

IF i remember correctly.....level edit has scripting program that does the "IF TRUE THEN:...." type of stuff, then you click a million things and get 1 script to work...same for cnc3 worldbuilder, look in there and play around, or else ask for more specific help, I dont use level edit much, so I cant help with where and what to click.

Is it possible for you to post all your 'questions' in one thread?

crazfulla wrote on Tue, 22 May 2007 18:56 Is it possible for you to post all your 'questions' in one thread?

Yes, or go read up some tutorials on <http://www.renhelp.net> and try something, you learn this stuff best by trial and error.

Anyhow, read this through and you should be able to do just that what you want for the engineers stuff:

Download these txt files and place them in the server\data folder

http://www.game-maps.net/zunnie/ren/cinematics/gdi_engineer_drop_goto_players.txt

http://www.game-maps.net/zunnie/ren/cinematics/nod_engineer_drop_goto_players.txt

the only way with existing scripts i believe would be attaching M03_Goto_Star to the engi's but they will go after all "Stars" or all "Players" in other words within range.

Create a dave arrow on map, note the ID, we'll call this the "GDIdropoffarrow"

Attach script: JFW_Custom_Play_Cinematic

Message=1000

ScriptName=gdi_engineer_drop_goto_players.txt

Location=xyz location where to drop the bots in gdi base

Facing=0.000

Create another dave arrow on map, note the ID, we'll call this the "NODdropoffarrow"

Attach script: JFW_Custom_Play_Cinematic

Message=1000

ScriptName=nod_engineer_drop_goto_players.txt

Location=xyz location where to drop the bots in nod base

Facing=0.000

Create yet another dave arrow that will "count" messages, double click on this arrow and change the ID to 100100, we will call this the "CountArrow"

Attach script to countarrow: JFW_Custom_Multiple_Send_Custom with these options:

ReceiveMessage=1500

ReceieveCount=3

SendMessage=1000

SendParam=1

SendID=<ID of GDIdropoffarrow>

Attach the same script to countarrow again: JFW_Custom_Multiple_Send_Custom this time with these options:

ReceiveMessage=1600

ReceieveCount=3
SendMessage=1000
SendParam=1
SendID=<ID of NODdropoffarrow>

If you do the above correct, when either team's engineers all three die, a message will be sent to the count-arrow and a dropoff cinematic will dropoff new engineers at the location your speicified.

Good luck!

Forgot to add: you have to trigger an initial dropoff of course...

Just "temp" three spawners (see renhelp.net) and set the maxspawns to 1 engineer. Attach script JFW_Death_Send_Custom to it and have it send message 1000 to the GDIdropoffarrow and NODdropoffarrow descibed earlier..

Oh one more thing i forgot to tell you.
You have to "mod" the CnC_GDI_Engineer_0 and CnC_Nod_Engineer_0 and under settings enable "Innate Behaviour" (or something along those lines it is called).
Set agressiveness to 100.000 or something with a TakeCoverProbability of 0.000

Also may want to set weaponerror to 20.000 or so, so they don't miss that much...
