So I have this model I downloaded from www.renhelp.net, But it came with no Textures.

I'm wondering, how I can find out the List of textures on this model so I can re-skin it?

Any suggestions would be appreciated. :)

Maybe click on the object, press M, and press 'get renegade texture' on the texture menu. Then look where you would normaly put in a texture in that menu and the texture's name should be there. [texturename].bmp

W3D Viewer, materials subtree?

Silly WW logo = missing.

(in case it's a gmax file, you would have to export it first ofcourse)
