Hello, when I try to install Renegade it has no text, and I can't install it.
I already looked at other similar topics about deleting your registry, and I did so, and aswell as the C:\Westwood folder to try to install it. It has yet to work.
Please help me with this problem, thanks.

Can this be fixed by restarting your PC?

If anyone explains why that works, I will give them money.

Depends...
About £10 in whatever your local currency is.

10 pounds, interesting. I'll look into it.

Off-Topic: Please tell me you're not using Talktalk as your ISP.

I would like you to understand it's not personal choice.
