Hey guys! Check this out. I got bored, so I created a cylinder and started extruding like crazy. Next thing you know I got a gun. Criticize please. How do I fix the butt so you can't see the edges? Suggestions and bashing are allowed!

It looks like some kind of funky grenade launcher.

Mesh Smoothing, either in the Edit Mesh/Poly rollout or add the Smoothing modifier to it.

It doesn't have a handle.. or is it supposed to cause the user a great deal of pain due to loss of hand?

Looks good anyway.

The gun don't look too great. But, I was proud of myself cuz I never knew I could make something like that. Thats the other thing... I don't know where to put the handle. I got the butt smoothed out. Maybe next time I try it might come out a lil better. Thanks for the comment oblivion!

Set to vertex mode, select all vertexes, set vertex meld to 0.001, hit weld/meld (can't remember what they called it.)

Switch to poly mode, select all polygons, and hit "align poly faces" or whatever the button is called.

finally, with all polygons selected it, clear all smoothing. If you still want it to be smoothed, hit auto smooth, or do it yourself.

That should fix your funny shadows, if you understand anything I wrote...
