Hey guys

I know you have probably heard this before, but i couldn't find it anywhere..so here goes.

When I first start renguard, it comes up with the screen where it tries to connect. I get this:

```
[18:57] Trying to connect to server #1...Failed!
```

```
[18:57] Trying to connect to server #2...Failed!
```

```
[18:57] Trying to connect to server #3...
```

then

Now, when I go into my router settings, I can make a custom entry, opening up ports 1-65535 and it will connect fine. But when I open the individual ports (3840, 4005, 4808, 4810, 4995, 7000-7002 TCP and 1234-1237 UDP)..I can't.

Obviously, I am in the correct area so my main question is if there are any other ports that need to be opened?

Jameson11 - Major...Pain

well i really dont know but when it says that it is not compatible you could try switching the compatibility of renguard to an older version of windows like windows 98 for example

Hope this helps
