Try running from game2.exe (this is without RG). If it does the exact same thing (popping up WW
config), this means it's not a Renguard related problem.

it still does it when i run it from game2.exe so i ges its not a renguard problem but i dont know why
it does it. it seems to work after i update for v1.037 but once i install renguard it doesn't.
