For the surface type try glass/glass permanble, 2 sided, and/or transparent.

Also, a few topics down called "How do I create this effect" or something alike, I messed around a bit with transparant water. I uploaded my attempt and it seems to work. You could open it up, and copy paste some settings.

Or, wait for a better solution

Renhelp is your friend my friend.

First, add your UV mapping and what nots to a box/plane.

Second, select the thing to be your glass and hit 'M.' the properties tab doesn't matter much but change the settings if you desire.

On the Pass 1 tab, hit 'Vertex Material'.

Under the 'Stage 0 Mapping' box change the Type from 'UV' to 'Environment'.

Next, on the 'Shader' Tab change the blend mode to 'Add'.

Then on the 'Textures' tab, change the texture to 'ref\_reflect2.tga'. Apply the texture and close the Material editor.

Now, right click your window and hit 'Properties.' Under the 'User Defined' tab, add "LVSMaterial1 = glass" without the quotes. Hit Ok.

Finally, keep your window selected and to go 'W3D Tools'. Under 'Geometry Options', select 'Shatter', and under 'Collision Options' select 'Physical', 'Projectile', and 'Camera.'

Voila, you're done.

If you don't want the window to shatter, just don't select "Shatter" under Geometry Options and do not apply "LVSMaterial1 = Windows1" to the User Defined properties, although you would want to make sure the surface type is Glass. The other steps should make it transparent.

Note, if you are using a plane make sure to select "2Side" under Geometry Options as well, although a very thin box might work better.

You won't be able to see through it in RenX but you will be able to see through it in game. While you are working on the map your best bet is to hide the windows so you can still see the insides of the buildings then unhide them before you export.

Do you lack chromosomes or a functional keyboard?
