scripts.dll 3.4.1 is out

Get it from <http://www.sourceforge.net/projects/rentools/>

It fixes a couple of bugs in 3.4 including a nasty memory leak that wasn't picked up by our memory leak detection code.

Changes:

Updated code to calculate Tangent and Binormal data to fix a memory leak.

It should also be a little faster.

Added a new class EnlargeableBufferClass to engine_vector.h. This is used for the tangent/binormal code.

Fixed an issue with the ExpVehFac scripts that would show up on naval maps.

Fixed a couple of bugs with the SH_FileVerificationControllerScript logic.

Made a cleanup in bhs.dll that makes it easier for me to keep track of which numbers I use for what

client->server network events.

Changed the shaders interface so that bhs.dll will call ShaderSet and ShaderSet2 even if shaders is off

in the dialog box and the checking of ShaderHooks now happens in shaders.dll

Fixed a bug where certain items that should have happened on map load were not happening on map load client side

Saberhawk will probably make an installer for this as soon as he can.

Sweet, wake up with the fix ready to go. I already played m10 and it ran great.

I am happy, memory leak fixed, now it doesn't crash half way through a level that the fps drops to a horribly low value on (prior to scripts, just a lot of stuff going on).

Im very happy in the improvements made, but I am unhappy in the new server listings guide.

This release crashes, as soon as the WOL MOTD appears, it crashes for me and someone else.

OH NOES.

Perhaps add a crashdump or some info or whatever?

Nvm, seems scripts 3.4.1 was incompatible with the RR mod (bad jonwil), it's fixed in the latest RR release.

The clients need nowadays scripts.dll, scripts2.dll, shaders.dll and bhs.dll according to my last usage of the scripts files.

Servers need the same files.

IRC commands are parsed using the bot/regulator which looks over the server and commands it. If the bot/regulator has its own dll files they will accompany it and the bot will call functions within them. The bot may also call functions inside scripts.dll and scripts2.dll to communicate with the game properly.

This version works really well, especially with all the single player maps online, i havent noticed any conflicts yet with textures flickering atleast with the standard maps. Roleplay2 on the other hand now has really odd lighting in alot of areas with polygons which are stretched only a tiny bit, and it never seemed to cause a blackness around the objects prior to this release. Other then that this is the most solid release ive seen yet, Game on!

I can hardly see any heights created by the normal maps. That can't be correct. I can see only a few but they are not shown correctly.

quick question, I know how the scripts comes with the shaders skins for the mammy and flamer but what about all the others, kinda funny to see 2 shinny vehicles then the rest all BLAH!!!

thats the biggest thing I am waitin for...
