Uses:

PaperTexture.tga and Asphalt\_03\_013.tga - Blaza  
water\_reflect.tga, water\_texture.tga and bump\_water -  
<http://renhelp.net/index.php?mod=Tutorials&action=view&id=30>

Buildings for RenX with Proxies - [renhelp.net](http://renhelp.net)

Constructive criticism please Some of the textures, EG tiberium. I couldn't make them look right :/  
I like the overall look of the map, though.

[http://www.dansprojects.com/Maps/C&C\\_MoonLight.mix](http://www.dansprojects.com/Maps/C&C_MoonLight.mix)

EDIT: Thanks to mero for teaching me a few things.

It looks alright, but with some alpha blending and more realistic looking cliffs, it could be a lot better.

Lol, i was going to teach him how to use soft selection but i think he was frightened by the graph on the rollout.

I actually watched him make this over vnc as i was giving him advice, and it was actually quite fun to do so. I helped him out with a bit of the alpha blending and collision boxes and what-not but he basically done the whole thing by himself. So big up to Dan on that.

Looks good but i don't have a Renegade installation on my so i can't test.

very square TBH. Would drag some verts around and make it more smooth looking. Also extrude the cliffs out (there are tuts on how to do this on renhelp).

10 points for effort though

Thanks for the comments

I'm going to recreate the whole map and add some assets. Make it more bumpy etc.. and add any changes EG: make it less square this time.

I have a few questions, though.

1) For the tiberium, i detached a few polygons and textured it with tiberium. Then i used alpha blend with the snow. Should i do this the other way round? detach, texture with snow. alpha blend tiberium into it?

2) The bit that divides the base floor texture (asphalt) and snow texture, you can see a clear line. Is it possible to make it look seamless?

3) Can i use a custom scripts.dll with the map (.mix) or does it have to use whatever the client/server has?

4) Is there anywhere or has anyone made and terrain models i can use? EG rocks, small bunkers. renhelp is limited.

5) Is there any extra buildings? EG repair pad, heli pad?

Bunkers are easy to make in Renx. Make a cylinder, copy it then scale down one of them. Boolean out the inside then make a rectangle and put it where you want the windows. Then boolean that out. Then make a box where you want the door and boolean that out. DONE! Heres a tower I made using that technique. If you want it, lemme know.

Needs some light clouds, fog with perfectly clear sky looks funny in renegade.

The cliffs are very 02esk

I have made another version of the map. I have a problem, though, I want to make a vehicle created on the airstrip go on a long way path. It just wont go further than the airstrip itself. Is there a way to fix this? I tried messing with the building controller and nothing.

how do you have the way-paths set up?  
Can we see a picture of the way-paths, and the way-path settings?

---

Just outta curiosity- how long did it take you to make this?

About 2 hours. I recreated the map, because it had bugs. So i don't need to fix the waypath anymore.

Yup, that did it, thanks.

It took about 2 hours for the first one.

Not bad, also maybe you can arrange the buildings differently? Being spawned in the back of the base most of the time would be annoying.
