Pretty straight forward actually, I pop the Renegade disk in my drive, Start Renegade, Go to "Single player campaign" When it loads the first mission it just crashes. :V

I use scripts 3.0.x with Renegade Resurrection..

Anyone else had this problem and know how to solve it? Help would be appreciated!

unistall both scripts and RR, and put them back when you're done.

Yeah but now I need the original scripts.dll.. I lost my installer. :<

Also why do scripts.dll and RR cause SP to crash?.. Really annoying.

original scripts.dll is now called scripts2.dll and sits in your Renegade folder.

Ohh..

/me is nooby

Thanks man!

EDIT: ... Still crashing.

Disable Resurrection by renaming modules/resurrection.dll to modules/resurrection.foo. If you renamed the file to something ending with .dll*, then it will still be loaded.

Yay!! This worked!

Thanks!
