Hey I was wondering if anyone could help me on this one. I've spent alot of time having my linux box not work with brenbot and I'd really like to get brenbot and stuff setup, but have had no luck. So I'm trying with a windows box. However, for whatever reason my fds just sits there after saying Console mode Activated and does nothing afterwards. Any ideas?

Your missing a file, the fds has nothing to do with brenbot, brenbot loads in a IRC program, is it just sits there, then make sure there is a error window also open, I've never had this problem as it usually then says

FDS loading

Checking for bandwith....

.....

.....

1mbps upstream bandwidth found

COonnecting to USA server..

Logged in OK!

Loading map CNC_field.mix

and game starts...

I was aware brenbot doesn't have to do with it... I was just mentioning that. The FDS doesn't even say any of that. Just console mode activated and sits. I'm also pretty damn sure a file is NOT missing.

Probably have errors that wont show or something, try redownloading ssaow or ssgm and add them again.

....? I don't recall mentioning that I was using either of those. Just normal old renegadeserver.exe or whatever it is. Download the fds, install it, set it up, try to start it and nothing.
