That's because
OR you are using an invalid serial
OR a wrong password
OR a nick that you don't own

XXCOLXX and I cannot connect on either one of our computers and we are using the correct nick, password and valid serial number and all the things that one must have in order to play online. Nothing has changed in our configuration and we have been playing up until 2 weeks ago when we have no longer been able to connect period!

Any idea why?

This is allways caused by an incorrect serial number in your server.ini file.

Remember to replace the serial with your game's CD Key without the dashes tho.

If you have that correct, maybe the serial number got cut off?
