I was playing yesterday for the first time in a month and as I just got to the Advanced Listings page Renegade crashed to desktop. This normally never happens so I was interested in this.

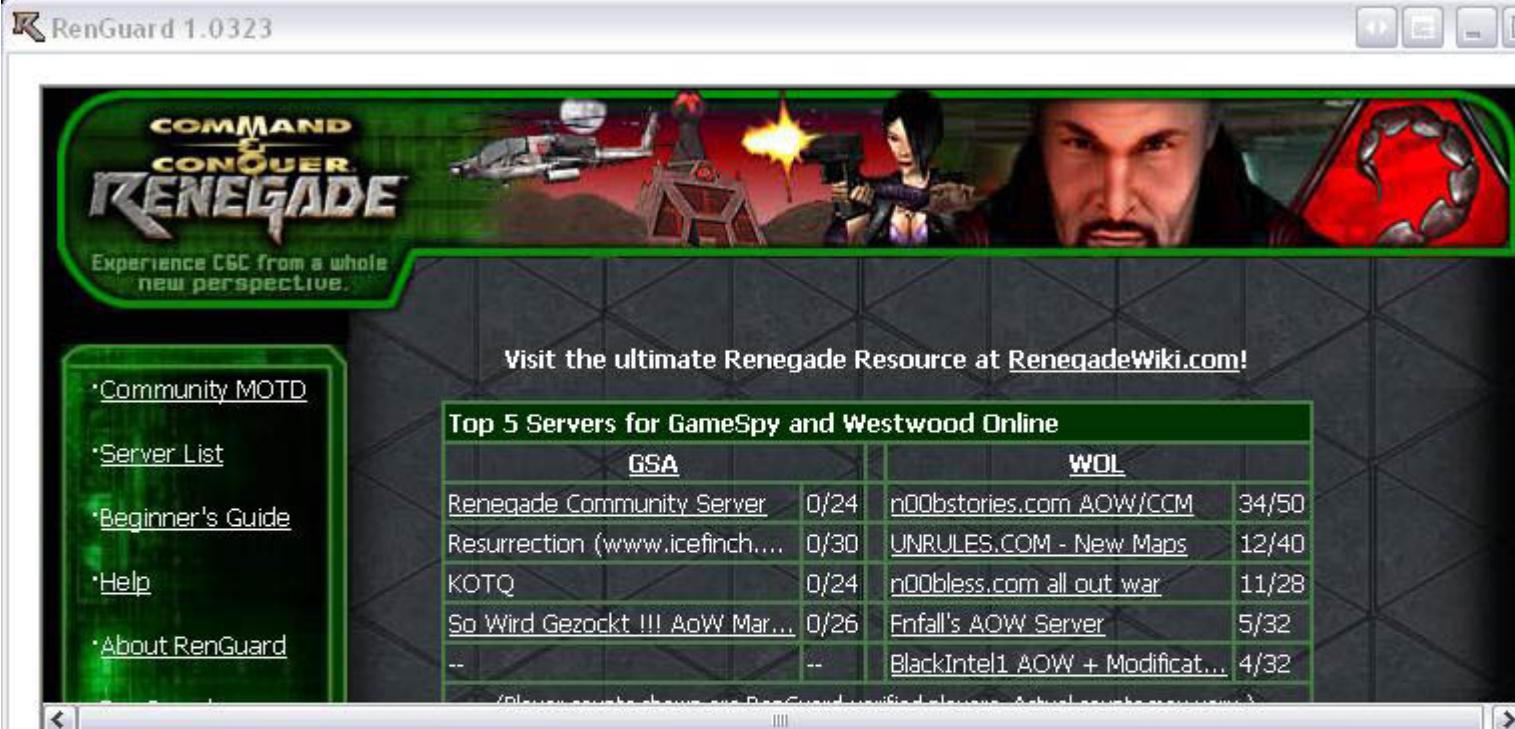

Renegard popped up as it normally does but it had a line output that I haven't seen before.

I attached a screenshot of RG, what I think is the most recent crashdump.txt, and my system info.

This could be nothing but I at least wanted to mention it.

It's just because you loaded renegade before RG had finished scanning. Give it time to finish scanning before clicking on the Renegade button in future and you won't have the problem.

Nothing unusual, btw, we've had about 5 topics about it and it happens to myself all the time. Just wait 20 secs before clicking 'renegade'.

Or just check auto load and it will never happen.

Thanks guys for the great responses.

I never knew that it took so bloody long to scan my files.

I will give it sometime to scan the next time I play.
