I've got a problem with Black Hand Scripts 3.4.1...

I need this to play Role Play 2... So here's my problem...

1. While installing it won't find "framedyn.dll", even if I double download the installer...
2. When I skip the error it goes fine... Then the game is lagging terribly, but only in the menu, because it won't run the level anyway. When I try to load the level the game will exit to Windows without any warning... So I don't have a chance to play anyway...
