I been having problems with the Tank limit on my maps/server, I dont know whats doing it, but its fucked up, sometimes I can buy two humvees and it be at limit or three meds at the PT screens, it say limit, but if I use the switches to buy tanks (modded server) it allows me to buy and build more tanks.

I dont know whats causing this... I havent done anything to affect this, its not brenbot (ran server without a bot) so..

Last week it was working fine and not it just goes shit.

Am confused.

Does that happen on standard maps?

Does your server has any modded scripts or other modifications?

If you have a recent version of scripts installed, that works.

IF your using a bot the bot usually has a feature for the V limit without you setting it each time you turn on the server, you can set on any map for anysized limit.
