I dont know whats up with this, I was playing bad dog gaming with a few friends and after like 3 mins I crashed, I got back in crashed about 2 mins, rejoined and crashed instantly, I set my internet connection to lan/t1 and was playing for about 10 mins and it crashed again. I said fuck it and went to bed, I figured it was just the server and me reacting. Now I went into old skool sniper got a sniper and crashed... The game just shuts off and renguard doesnt say anything tried with and without renguard same thing.

I will say this happened when I went from scripts 3.4 to 2.9 due to me not wanting the shaders. I think this is my latest crash dump too.

2.9.2's crashdump is called crashdump.txt, only 3.4 + create crashdump<number>.txt files, so this is either the wrong crashdump or you are still running 3.4 scripts.dll

According to the crashdump you posted the error is occuring in game2.exe, which usually (but not always) implies the problem is in renegade itself and not the scripts...

Rubbish, can be a bug in any loaded library. In this case it crashes when unloading a texture - a bug I see quite often on clients with scripts.
