yea, nightregulator is a bot for fds.

There's also brenbot and some others.

You can find a bunch of server resources here:

[http://www.renegadeforums.com/index.php?t=msg&th=17104&start=0&rid=2\\_0681](http://www.renegadeforums.com/index.php?t=msg&th=17104&start=0&rid=2_0681)

It's a bit outdated, but it lists a bunch of regulators (bots)

O\_o go read the read me

there is brebot, Cloudy, nightregulator and some others.

First off u need a box/server before u can run these things

unless your making this server for personal use

lol wow, abusing the unknowing all the way.

A Server (also called box, by their looks) is a dedicated piece of hardware, usually designed to run online software on (also Renegade!). Usually those are owned and managed by companies, where you can rent one. Renz0r is not such a company, just an expensive in between parasite (no way to word it more positive, after above post).

I suggest you google a bit, and ask some advice, if you are looking for a server.

edit: But ofcourse, you could also use your home computer to host Reneagde on. Just don't expect to be able to host big games.

First off i'd suggest reading my FDS and Regulator tutorials on nightreg forums, wherever fl00d3d has put them. If you cannot read and fully understand them you are not cut out to host your own server.

---
