I have a dual core server here at my house which is already configured to do other things. I am running CentOS 5 wich uses gcc 4.x.x . I am currently running the windows FDS under a Qemu of Server 2k3 but this is wastefull is there a way to use GCC 3 on that box or use gcc 4 to compile.

P.S. I have already tried I get compile errors on teh wrapper.

huh? You don't need to compile anything to use a Linux server!

"yum install compat-gcc-34" and use the other binary (rpm -ql compat-gcc-34 will help you find it)
